DETAILED ACTION

Drawings

1. Formal drawings discussed in the specification have been omitted. Applicant must include a copy of the drawings in his response.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Faulhaber (3887814).

Faulhaber teaches a method for determining the effects of a fancy yarn by measuring yarn diameter by meeting first and second undefined criterion, a specifiable number of largest diameters is determined, measured, and averaged, and relative effect thickness is determined, diameters are compared to reference diameters, and variation is determined (Abstract; claims). In regards to the detection every two millimeters, the measurements are continuous and would satisfy the requirements.

Allowable Subject Matter

4. Claims 5-7 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Arb (6244030), Samoto (5119308), Mannhart (4168604), Nevel et al (6741726), Nevel et al (6130746), Nakade (5748481), and Wassenhoven (4891974) all teach what is well known in the art.
